

HOS / ELD

(Hours of Service / Electronic Logging Device)

What's an electronic logging device, or ELD?

Put simply, an ELD is an electronic solution that enables professional truck drivers and commercial motor carriers to easily track Hours of Service (HOS) compliance.

By December 2017, all CDL drivers that are required to keep a Record of Duty Status (RODS) must use an ELD to document their compliance with HOS rules.

The new ELD rule adds certain technical and performance specifications that define exactly what the device must feature.

HOS Violations Alerts & Auditing

- Live alerts for both drivers & dispatcher
- Single click audit report
- Improve CSA ratings

Electronic Logs & ELD

- Eliminate paperwork & save time plus money
- Completely editable logs with compliance
- Self-Install in minutes
- Always updates with the compliance changes

Load Scheduling & Dispatching

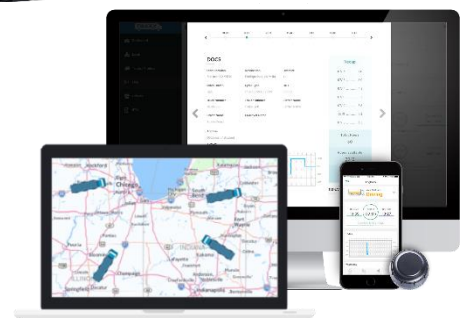

- Match loads easily with truck schedulers
- Dispatch loads directly to truckers
- Plan days and weeks in advance
- Get proof of delivery in seconds with load images

Features

- Hours-of-Service reporting (e-logs)
- Pre/Post trip vehicle inspection reporting (DVIR)
- IFTA (International Fuel Tax Agreement) mileage by state data

Benefits

- Editable logs
- Less data sent following stops
- Potentially fewer citations and greater driver privacy
